CYNARIN ULTRA

ABSTRACT
ARTICHOKE 2%

The secret of the anti-cellulite properties of this extract lies in its detoxifying action and its diuretic action. It is also known as Cynara scolymus, with its active ingredient Cynarin, often used to treat cellulite and fat. Cynarin Ultra helps stimulate the lymphatic drainage system.

Artichoke extract has been used in traditional medicine for centuries as a natural diuretic remedy, efficient at mobilizing fatty deposits, detoxifying and lowering cholesterol naturally.

Artichoke extract contains properties that act against oxidative stress induced by inflammatory mediators and also exerts some control over lipolysis, favoring the synthesis of energy-transporting enzymes NAD-NADH2 and NADP-NADPH2. It acts as a diuretic and vasoconstrictor, stimulating lymphatic drainage.

INPUT AESTHETIC

Anti-cellulite Solution

CELLULITIS

LOCALIZED FAT

This artichoke extract solution mobilizes fat deposits in tissues such as: white adipose tissue. These fats are poured into the blood, from which they are subsequently eliminated from the body.

Mesoslim

ORGANIC SILICON

0.5% ORGANIC SILICON

Structural element of connective tissue, organic silicon hydrates, renews and regenerates cells. It stimulates and regulates the proliferation of fibroblasts, increases collagen synthesis and promotes the regeneration of elastic fibers.

The Organic Silicon Regenerating Solution softens, tones and smoothes the skin, slowing down the aging process. Returns strength, flexibility and elasticity to the collagen and elastin of connective tissues.

Organic silicon is a structural component of connective tissue that is part of important macromolecules such as elastin and collagen. By inducing the control and proliferation of fibroblasts, this active ingredient favors the regeneration of elastic and collagenous fibers, efficient for mobilizing fatty deposits, detoxifying and reducing cholesterol naturally.

In microcirculation, silicon modifies venous capillaries and lymphatic permeability, in adipose tissue it stimulates CAMP synthesis as well as triglyceride hydrolysis.

INPUT AESTHETIC

Regenerative Solution

FIRMING

CELLULITIS

ANTI AGING

LOST OF HAIR

STRETCH MARKS AND SCARS

Organic silicon also keeps the epidermis hydrated, firming and strengthening the skin, as well as acting as an antioxidant to actively prevent the acceleration of premature aging. It is a stimulator and regulator of fibroblasts and is effective in the prevention of aging, the destruction of free radicals and hydration. On the other hand, silicon normalizes cell metabolism, regenerates tissue and helps reduce cellulite. A lack of silicon implies the destructuring of connective tissue.

Mesoslim

LIPOESTABIL

PHOSPHATIDYLCHOLINE

Naturally present in cell membranes, this phospholipid dissolves fat stored in adipocytes.

Mesolipoestabil emulsifies fat, allowing it to be absorbed and transported. This makes it the ideal solution to eliminate localized adiposities.

Phosphatidylcholine is the liquid form of lecithin, an enzyme produced naturally in our body and the main component of all cell membranes and lipoproteins that circulate in the blood.

This active ingredient facilitates the emulsification of fat into smaller particles, allowing its absorption and transport.

INPUT AESTHETIC

Lipolytic Solution

ANTI AGING

LOCALIZED FAT

After administration, phosphatidylcholine induces an enzymatic reaction that leads to fat dissolution, producing a monoglyceride nanoemulsion that is transported into the liver and metabolized by beta oxidation.

Lipolysis is not a replacement for plastic surgery, but it is a very effective therapy for reducing smaller fatty areas.

Mesoslim

Caffeine is a type of alkaloid that has an organic base obtained from nitrogen-containing plants - coffee, tea, cola nuts, cocoa beans, mate and guarana.

Caffeine Plus is capable of stimulating cell metabolism, especially promoting the hydrolysis of triglycerides into free fatty acids and glycerol thanks to its stimulating effect and increased mobilization of free fatty acids in the circulation.

This effect is particularly necessary in the phenomenon of cellulite where, due to an alteration in the microcirculation, the adipocytes are stimulated to synthesize and accumulate higher amounts of triglycerides, causing an increase in cell size.

INPUT AESTHETIC

Lipolytic Solution

LOST

CELLULITIS

LOCALIZED FAT

CAFFEINE PLUS

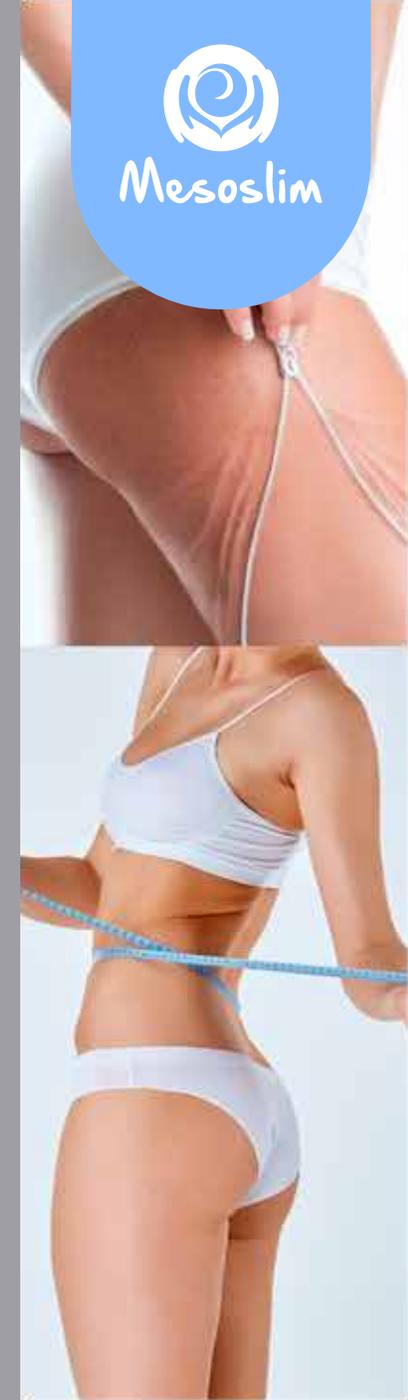

20% COFFEE

The action of the Caffeine Plus formula is to drain the body's fat cells, that is, it accelerates circulation and stimulates the release of accumulated fat in the adipocytes, to be burned by the body's own metabolism.

In addition, Caffeine Plus tightens and tones the skin, helping to reduce the appearance of cellulite. When applied topically, it acts as a lipolytic agent, destroying fatty tissue and causing localized weight loss, without causing side effects.

In addition, it increases lipolysis by inhibiting cyclic nucleotide phosphodiesterase, which is responsible for catalyzing the conversion of cyclic AMP to AMP. The resulting high concentrations of cyclic AMP activate inactive hormone-sensitive lipase and promote lipolysis.

This type of alkaloid acts to drain adipocytes, firms and tones the skin and helps further reduce the appearance of cellulite, in addition to acting as a diuretic. This last action helps to separate the water from the adipocytes, thus reducing their size.

CARNITINE PLUS

L-CARNITINE

In its natural form in the body, l-carnitine is responsible for metabolizing fat, once the accumulated fat is disintegrated, it mobilizes fatty acids into the bloodstream, coupling to them and transporting them to the area of the cell where fat is converted. in energy. CARNITINE PLUS is essential to oxidize fats in an optimal way.

L-carnitine and acylcarnitines are also involved in the reacylation and rearrangement of phospholipids in the cell membrane, thus acting as secondary antioxidants to protect it.

According to several studies, l-carnitine improves the levels of alpha-tocopherol in the body, a powerful fat-soluble antioxidant, strengthens the cell protection membrane and improves the functioning of plasma lipoproteins.

INPUT AESTHETIC

Lipolytic Solution

CELLULITIS

LOCALIZED FAT

Since fat oxidation is the main source of muscle energy, l-carnitine deficiencies result in low energy levels and muscle weakness. In addition, based on the multiple functions described, l-carnitine represents an aid in the treatment of cellulite, where the alteration of microcirculation affects the normal functionality of adipocytes, which begin to synthesize and accumulate excessive amounts of triglycerides

The action of l-carnitine is very important since it not only promotes catabolism, but also helps detoxify and regenerate cells and restore the physiological functionality of the dermis.

THIOMUCASE

MUCOPOLYSACCHARIDA

The active ingredient in THIOMUCASE is called mucopolysaccharidase; which is an enzyme complex, generally or commonly present in the human body, whose main function is to depolymerize (unfold or disintegrate) the mucopolysaccharides (also known as glycoaminoglycans) of the subcutaneous connective tissue.

It sounds interesting, but what are glycoaminoglycans or mucopolysaccharides, since they are a kind of carbohydrate present in different joint structures; for example, glucosamine and chondroitin belong to this family of compounds, as does keratin.

In this way, the mucopolysaccharidase, known in the medical and biochemical world as Diffusion Factor, disintegrates these carbohydrates, allowing the depolymerization residues to be metabolized, allowing the drugs to have free access to the tissues; on the other hand, it also promotes hydrotropia (subcutaneous water mobilization) and lipotropia (subcutaneous fat mobilization).

INPUT AESTHETIC

Lipolytic Solution

CELLULITIS

LOCALIZED FAT

THIOMUCASE facilitates the mobilization or hydrophilic drainage of the connective tissue, reducing the presence of edema (inflammation characteristic of the joints), rapidly disappearing hematomas (bruises) and facilitating the loss of retained fluids. Also, it allows the biochemical entry (membrane permeabilization process) of the cellular adipose tissue, releasing and mobilizing the accumulated fats (lipotropic effect), helping to improve the response to treatment in obesity and to solve the processes in which there is some alteration of lipids at the biochemical or physioanatomical level (lipodystrophies).

Mesoslim

TRIAC

ACID
TRIIODOTHYROACETIC

TRIAC is also known as tiratricol or triiodothyroacetic acid. It is a metabolic derivative of T3 (thyroid hormone), of which it only retains its lipolytic activity, acting on adipose tissue. Effectively tones, eliminates cellulite and rebellious lipotrophy to metabolize. It is indicated for the treatment of cellulite and localized areas with accumulations of fat, contributing to the progressive elimination of the orange peel appearance in women and as a fat reducer in men.

The TRIAC increases the metabolism of fats and carbohydrates, thus increasing energy expenditure, therefore fat oxidation and weight loss will occur.

It increases cellular thermogenesis, since through this mechanism, caloric expenditure is also increased, it is one of the most used fat reducers. Lowers cholesterol and triglyceride levels in the blood.

INPUT AESTHETIC

CELLULITIS

LOCALIZED FAT

Helps control blood glucose levels. Helps the metabolic activity of hepatic origin. Facilitates heart function. Prevents the accumulation of ketones. Optimizes the use of fats for energy. Increased protein synthesis and increased muscle tone. Increases oxygenation and produces greater muscle resistance, thus increasing exercise time and reducing fatigue. Increased resistance to stress.

Mesoslim

HIDROSLIM PLUS

TRIPLE EFFECT COCKTAIL
L-CARNITINE,
ORGANIC SILICON,
ASIATIC SPARK

The secret of the properties of this cocktail called: Hidroslim Plus Cocktail lies in the composition of: L-carnitine, organic silicon and centella asiatica, a combination of ingredients perfectly studied and developed to take advantage of the synergy between different active ingredients. With lipotropic, anti-cellulite and regenerating effect.

The synergy of the Hidroslim Plus Cocktail is developed as follows:
L-carnitine is responsible for metabolizing fat, once the accumulated fat is disintegrated, it mobilizes the fatty acids into the bloodstream, coupling to them and transporting them to the area of the cell where the fat is converted into energy, it is essential to burn the fats optimally.

Organic silicon is a structural component of connective tissue that is part of important macromolecules such as elastin and collagen. By inducing the control and proliferation of fibroblasts, this active ingredient favors the regeneration of elastic and collagen fibers; organic silicon normalizes cell metabolism, regenerates tissue and helps reduce cellulite. Centella Asiatica has the potential to improve connective tissue integrity, raise antioxidant levels in healing, and improve capillary permeability; It also helps strengthen capillaries and veins, contributing to better circulation, stops the formation of fibers that trap cellulite deposits, improves tissue flexibility and stimulates collagen synthesis by energizing dermal fibroblasts, resulting in stronger veins.

AND SCARS

LOCALIZED FAT

L-carnitine and acylcarnitines are also involved in the recylation and rearrangement of phospholipids in the cell membrane, thus acting as secondary antioxidants to protect it. According to several studies, L-carnitine improves the levels of alpha-tocopherol in the body, a powerful fat-soluble antioxidant, strengthens the cell protection membrane and improves the functioning of plasma lipoproteins. Organic silicon keeps the epidermis hydrated, firming and reinforcing the skin, as well as acting as an antioxidant to actively prevent the acceleration of premature aging. It is a stimulator and regulator of fibroblasts and is effective in the prevention of aging, the destruction of free radicals and hydration. One of the primary mechanisms of action of Centella Asiatica is the stimulation of type 1 collagen production. Triterpenes, and more particularly Asiatic acid, stimulate collagen synthesis and elastin biosynthesis, helping tissue regeneration. They provide better re-epithelialization, normalize the connective tissue that allows the venous walls to be strengthened and improve their elasticity.

Mesoslim

METABOLFIT REDUCTIVE COCKTAIL

METABOLFIT is a product developed for the treatment of obesity, which attempts to correct problems such as high cholesterol, triglycerides, hypertriglyceridemia, total lipids that reveal lipid abnormalities that accompany obesity.

Whenever we need to activate or increase lipolysis at a general level of the body or by focusing on specific areas of fat accumulation, we use a cocktail called METABOLFIT.

At a general level, METABOLFIT acts on the body's tendency to adiposis and fatty accumulations. At a peripheral level, it acts on the intra-adipocyte lipolytic cascade, supporting energy consuming systems, increasing the production of lipolytic enzymes (triglyceride - lipases) and favoring the activation of cyclic AMP, stimulating its synthesis and inhibiting its degrading enzymes, phosphodiesterases.

METABOLFIT is a homeopathic product indicated as an adjuvant in the treatment of obesity in all its forms and manifestations (general, localized, predominantly gynoid or android, etc.) as well as in the most common dyslipidemias that usually accompany the problem of obesity: Hypercholesterolemia, Hypertriglyceridemia, hyperlipidemia etc.

It does not produce dependency, since it does not act at a central level, but at a peripheral level on adipose cells. It has good tolerance and absence of toxicity and does not cause excitability or insomnia.

It is important to be clear that METABOLFIT is not an "Anti-cellulite", since it does not act on any of the determining factors of cellulite, but it should be used in combination with LIPODISTROFIT in cases of cellulite with fatty deposits coexisting in the same area.

The secret of the properties of METABOLFIT lies in the combination of ingredients perfectly studied and developed to take advantage of the synergy between different active ingredients. With a powerful lipotropic effect

Mesoslim

Its composition is as follows:

- GRAPHITES D10, D30, D200: Tendency to adipose tissue, chronic constipation, dry and brittle skin and eczema.
- LEVOTYROXIN D12: Promotes oxidation processes throughout the body.
- FUCUS VESICULOSUS D6: Struma-adiposis and glandular inflammations of the scrofulous type.
- ATP D8: Support of consuming systems.
- AMPc D6: Stimulating reactivation in case of enzymatic blockages, intracellular control factor.
- TRIAC D6, D8: Photodesterase inhibitor.

METABOLFIT is perfectly stackable with the MUSCLEFIT and LIPOTROFIT products, thereby forming a Lipotropic, Anti-cellulite and Firming cocktail.

Dosage and frequency: The maximum dosage per session is 10 cc. The frequency and number of sessions could consist of 4 to 6 weekly sessions, 4 to 6 sessions every fortnight, and very important to perform "maintenance sessions" once a month for 4 to 6 months.

LIPOTROFIT

COCKTAIL
ANTI-CELLULITE

LIPOTROFIT is a product developed for the treatment of cellulite. It is a powerful anti-cellulite that acts by favoring blood and lymphatic circulation, helping to break down triglycerides, acting on the oedematous-fibrous component.

A simplified explanation of the lipodystrophic process is as follows: the blood is propelled by the heart through the arteries, on their way they subdivide and thin until they become capillaries whose thin walls allow intimate contact between blood and tissues, so Inversely, the capillaries collect the waste products and lead them to the veins and through them to the organs that are going to be in charge of expelling them from the circuit. The moment in which the blood offers oxygen and food and is loaded with waste, occurs in the tissue. conjunctive, if there is a deficit of irrigation or an overload of toxins, the synchronization of the system fails and the functional balance of the tissue is altered, this alteration is what is called LIPODYSTROPHY and it is a progressive alteration of the subcutaneous tissue.

There is a widespread confusion that links lipodystrophy and obesity, which to a certain extent is understandable since both affect the same tissue and alter the aesthetic image and body scheme; however obesity is only a modification of fat cells: therefore it has no intrinsic relationship, in fact, it differs in manifestations of location and effects, even a large part of the women who suffer from lipodystrophy are not obese, although lipodystrophy and obesity they can coexist.

Lipodystrophy or cellulite can be associated with obesity, or located on the hips, buttocks, thighs, knees, calves and ankles as the most common areas, although it can also be found on the abdomen, neck, arms or lumbosacral region.

The secret of the properties of LIPOTROFIT lies in the combination of ingredients perfectly studied and developed to take advantage of the synergy between different active ingredients. With a powerful anti-cellulite effect.

● Its composition is as follows:

PLACENTA SUIS (D6): Peripheral circulatory disorders and dysmenorrhea.

FUNÍCULUS UNBILICALIS SUIS (D1): Damage to connective tissue, circulation disorders, collagen disease and adipose-genital dystrophy.

LEVOTHIROXIN (D12): Promotes oxidation processes and stimulation of connective tissue.

SECALE CORNUTUM (D4): Peripheral circulation disorders and paresthesias.

TABACUM (D10): Vascular spasms, circulatory collapse and migraines.

AESCULUS (D4): Peripheral circulation regulation, lymphatic regulation, venous stasis and varicose veins.

SUIS ARTERY (D10): Peripheral circulatory disorders and stimulation of capillary functions.

VIPERA BERUS (D10): Phlebitis, heaviness in the legs and circulatory weakness. JUGLANS (D10): Lymphatism.

FUMARIA OFFICINALIS (D4): Blood purifier and liver disorders.

BARIUM CARBONICUM (D13): Arteriosclerosis and lymphatic disease.

SEPIA (D4): Nervous exhaustion, neurovegetative syndrome and menopausal conditions.

PULSATILLA (D4): Venous congestion, connective tissue deoxidation and premenstrual tension.

LIPOTROFIT It is perfectly stackable with the METABOLFIT and MUSCLEFIT products, thus forming a Lipotropic, Anti-cellulite and Firming cocktail.

Dosage and frequency: The maximum dosage per session is 10 cc. The frequency and number of sessions could consist of 4 to 6 weekly sessions, 4 to 6 sessions every fortnight, and very important to perform "maintenance sessions" once a month for 4 to 6 months.

MUSCLEFIT FIRMING COCKTAIL

The secret of the firming properties of MUSCLEFIT lies in the combination of ingredients perfectly studied and developed to take advantage of the synergy between different active ingredients. It incorporates in its composition elements that are intermediaries of the Krebs cycle; In this way, cell metabolism is favored, facilitating not only the recovery of muscle groups after physical exercise, but also allowing their development and delineation, exerting a firming effect.

Its firming action is due to the individual actions of each of its components: regenerator, revitalizing, moisturizing, antioxidant and cellular metabolic protector. Its particular composition makes it a useful product to use not only in slimming and firming treatments in Aesthetic Medicine, but also in Sports Medicine.

INDICATIONS GENERAL:

Sports medicine:

- As a complement to your training program to increase the synthesis of muscle mass.
- Increased power, endurance and muscle strength.
- Adaptation to exercise, reduction of muscle fatigue, energizing, adaptation to oxygen consumption by muscle fibers.

Aesthetic Medicine:

- Complementary anti-flaccidity therapy in firming treatments.
- Complement to weight loss treatment for optimal maintenance of muscle mass.

Mesoslim

Mesoslim

COMPOSITION:

Musculus suis D4, testis suis D4, embryo suis D8, Funiculus umbilicalis suis D4, glandula suprarrenalis suis D10, cortisonacetat D10, strychninum phosphoricum D6, magnesium phosphoricum D8, acidum ascorbicum D6, vitamin B1 D6, vitamin B2 d6, Vitamin B6 D6, nicotinamide D6, Acidum cis-aconiticum D8, acidum citricum D8, acidum fumaricum D8, acidum 2-oxoglutaricum D8, acidum dl-malicum D8, acidum succinicum D8, barium oxalsuccinicum D10, natrium oxalaceticum D8, natrium PYRUVICUM D8, cysteine D6, adenosine triphosphate (ATP)D8, nicotine-adenine-dinucleotide (NAD) D8, coenzyme A D6, Acidum lipoicum D6.

MUSCLEFIT is perfectly stackable with the METABOLFIT and LIPOTROFIT products, thus forming a Lipotropic, Anti-cellulite and Firming cocktail.

Dosage and frequency: The maximum dosage per session is 10 cc. The frequency and number of sessions could consist of 4 to 6 weekly sessions, 4 to 6 sessions every fortnight, and very important to perform "maintenance sessions" once a month for 4 to 6 months.

ADIPOFORTE+CLA

Slimming Cocktail
+ CLA

Adipoforte + CLA is a highly functional cocktail for the loss of localized body fat, fighting the arms, legs and crotch. Thanks to its liquid-draining effect, it will fade cellulite and orange peel skin, having a correct functioning of blood and lymphatic flow. It is ideal to reduce sizes or easily eliminate cellulite.

- Helps control and lose weight thanks to the action of L-Carnitine, which metabolizes fat to use it as energy. CLA reduces the build-up of fat deposits and lowers cholesterol and triglyceride levels.
- Centella Asiatica helps improve circulation, for this reason it allows to treat cellulite and stretch marks. And Rutin is world-renowned for improving collagen synthesis and the appearance of skin.

INDICATED IN TREATMENTS OF:

OVERWEIGHT
AND OBESITY

CELLULITIS

STRETCH MARKS
AND VARICOSE
VEINS

CONTRAINDICATIONS:

Contraindications: Kidney diseases. Pregnancy. Lactation.

Adverse effects: Allergy to the components of the formula.

Important points: It is ideal to reduce sizes or easily eliminate cellulite.

INGREDIENTS:

- Water
- Sodium chloride
- CLA (Conjugated Linoleic Acid)
- Organic Micro Filtered Caffeine
- Acetyl Carnitine
- Rutine
- Sodium metabisulfite
- Extr. Asiatic spark

Mesoslim

FAT-BURNER XTREME

SLIMMING COCKTAIL EXTREME

The Fat – Burner Xtreme product is a cocktail with active ingredients directly aimed at the loss of adipose tissue located in the abdomen, legs, arms and jowls. It considerably increases the body's energy expenditure, making it easier to use fats, quickly starting their elimination due to its powerful draining effect.

It is an excellent option to lose weight and reduce sizes, while firming and caring for your skin, thus improving body aesthetics.

Artichoke extract contains properties that act against oxidative stress induced by inflammatory mediators and also exerts some control over lipolysis, favoring the synthesis of energy-transporting enzymes NAD-NADH2 and NADP-NADPH2. It acts as a diuretic and vasoconstrictor, stimulating lymphatic drainage.

BENEFITS

- It is ideal for reducing cellulite, orange peel skin and sagging treatments.
- They suppress the appetite, the so-called "satiating".
- Promotes a better assimilation of fats in meals.
- Has a mild thermogenic or fat burning effect.
- Reduce weight, size and percentage of body fat in the area to be treated, very quickly and safely.
- Firm the skin.
- Helps speed up metabolism, while improving cell and liver functions.

Contraindications: Do not use in very high or continuous doses, as it can cause a disorder in the thyroid gland. Do not use pregnant or lactating women.

Secondary effects: May cause irritation or reactions in the applied area, slight inflammation. Excessive sweating when exercising.

Important points: It is ideal for those who want to lose weight and size quickly, while reaffirming the area worked on.

INGREDIENTS:

- Water
- Sodium chloride
- Aminophylline
- Theophylline
- Acetyl L – Carnitine
- extr. Fucus Vesiculosus
- Tyrosine
- Vitamin C
- extr. Inherit Helix
- Sodium metabisulfite
- Vitamin E (Alpha, Beta, Gamma Tocopherols)

BENEFITS

- It is ideal for reducing cellulite, orange peel skin and sagging treatments.
- Has a mild thermogenic or fat burning effect.
- Reduce weight, size and percentage of body fat in the area to be treated, very quickly and safely.
- Firm the skin.
- Helps speed up metabolism, while improving cell and liver functions.

Indications for use: Indicated in cellulite and localized areas with accumulations of fat, to contribute to the progressive elimination of the appearance of orange peel in women and as a fat reducer in men.

REDUGRAS PLUS

SLIMMING COCKTAIL INTENSE

The redugras plus cocktail is a combination of ingredients with a lipolytic and draining effect, thanks to the metabolic and mobilizing effect of fatty deposits, it helps eliminate fluid retention in the body. This makes it an excellent ally for rapid weight loss.

- **Contraindications:** Vascular, cardiac diseases, as well as in pregnancy and lactation.
- **Secondary effects:** May cause irritation or reactions in the applied area, slight inflammation. Excessive sweating when exercising.
- **Important points:** It is ideal for those who want to lose weight and size quickly, while reaffirming the area worked on.

INGREDIENTS:

- Water
- Sodium chloride
- Triiodothyroacetic Acid (TRIAC)
- extr. Cynara Scolymus
- Extr. Cynara Scolymus
- Phosphatidylcholine
- Choline Hydrochloride
- Sodium metabisulfite
- Extr. Fucus Vesiculosus

COLLAGEN FAT – BURNER

REDUCER COLLAGEN
ABDOMINAL

The Collagen Fat-Burner is a mixture of substances that generates firmness, nourishes, regenerates, rejuvenates, reaffirms and increases skin tone while having antioxidants. This set on the skin will cause us to look healthy and with enviable skin.

HYDROLYZED COLLAGEN

Slows down the passage of time; acts as a direct oxygen to your skin and cells; It helps in the repair and regeneration of ligaments, tendons, joints and bones. Smooths fine lines of expression and facial wrinkles. Strengthens and beautifies the hair; reduces its fall; increases volume and the appearance is naturally brighter and healthier.

HYDROLYZED COLLAGEN

Slows down the passage of time; acts as a direct oxygen to your skin and cells; It helps in the repair and regeneration of ligaments, tendons, joints and bones. Smooths fine lines of expression and facial wrinkles. Strengthens and beautifies the hair; reduces its fall; increases volume and the appearance is naturally brighter and healthier.

HYALURONIC ACID

Hydration, Humectant, Increased resilience, Smoother skin tone. Fine lines and wrinkles less visible, Stimulates skin cell regeneration, pigmentation, and clarity.

CAFFEINE:

- FOR HAIR: Caffeine has the ability to interact with the follicles, helping hair grow faster.
- AGAINST CELLULITE: This means that it stimulates the elimination of localized fat and, consequently, improves the appearance of cellulite, which is an alteration of the fat cell.
- AS EXFOLIATING: Caffeine is also an excellent natural product for exfoliating and removing dead skin cells.

Mesoslim

Indicated: In the treatment, expression lines, cellulite and flaccidity

Adverse effects: Redness in the application area. Hematoma. Swelling. Pruritus

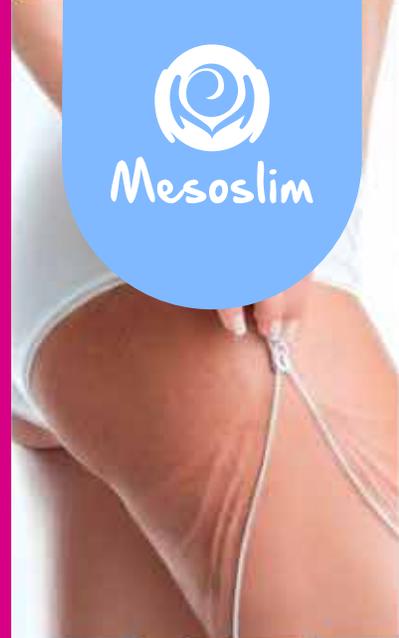

Contraindications: Allergy to the active ingredients, problems related to falling asleep, pregnancy and lactation

Important points:

This mixture of substances generates a powerful product that improves the appearance of the skin giving greater firmness and elasticity, especially in the abdominal area.

INGREDIENTS:

- Water
- Sodium chloride
- Ultra Purified Type 1 Collagen
- Vitamin C
- Caffeine
- Hyaluronic acid
- Methylpropanediol
- Sodium propionate

GLUTEOFIT MIX

Toning Cocktail buttocks

The gluteofit mix is a cocktail of active ingredients for mesotherapy indicated for the restructuring and growth of muscle fibers, its formula of precursor amino acids of striated muscle and actin favor the proper functioning of the tissue to be treated, in this case the buttocks.

● El gluteofit mix es un coctel altamente funcional a la hora de darle volumen, firmeza a los musculos, alejandose de la flacidez.

Vitamin C: Helps the formation of collagen and elastin helping to tighten your skin and delay its aging.

Complex B: Synthesizes proteins, helping the correct growth of the muscle cells of the buttocks.

Protein amino acids: Helps the formation of the muscular structure of the gluteus.

Increases and activates the buttocks through protein and genetic stimulation. It also manages to increase the growth of muscle tissue cells, eliminates flaccid skin and cellulite, giving it shape and elasticity.

We must not forget that we cannot rule out good eating habits and physical exercise within our lifestyle, with which we can prolong the effect of these alternative treatments that arise every day to help us look and feel better.

INGREDIENTS:

- Water
- Branched Amino Acids
- Hyaluronic acid
- Vitamin C
- Deoxyribonucleic acid
- Complex B
- Sodium benzoate

Mesoslim
